Wireless Door/Window Sensor

Accessory for Wireless Alarm System WS300S/WS500S

The SafeHome Door-/Windowsensor is a magnetic sensor consisting of two parts.

The first part - the magnet - is mounted on the frame of the window or door, and the larger part - the transmitter - is mounted on the fixed part of the window.

When the window or door is closed and the two parts positioned close to each other, a magnetic field is created. When the window or door is opened, the magnetic field will be breached and the alarm will be triggered.

SafeHome trådløse dør-/vindueskontakt er en to-delt magnetisk sensor. Magneten monteres på døren eller vinduets ramme og den lidt større enhed med batterier monteres på bygningens faste ramme. Når døren eller vinduet er lukket, sidder de to enheder nær hinanden, og skaber derved en magnetisk kontakt.

Når døren eller vinduet åbnes, vil de to enheder blive fjernet fra hinanden hvorved den magnetiske kontakt brydes og alarmen udløses.
